

## TOILETS and SINKS AREN'T TRASH CANS!

Your sewer system is not a trash can. Your sewer system contains a collection of living organisms that digest and treat household waste.

### **NEVER FLUSH THESE DOWN THE TOILETS OR POUR DOWN YOUR SINKS:**

- Cooking grease or oil
- Cigarette butts
- Feminine hygiene products
- Coffee grounds
- Condoms
- Cat litter
- Dental Floss
- Paper towels
- Diapers
- Pharmaceuticals
- Household chemicals like gasoline, oil, antifreeze, & paint or paint thinners
- Flushable or non-flushable wipes – Flushables do not disintegrate

### **Have a Garbage Disposal:**

Just by eliminating or limiting the use of a garbage disposal will significantly reduce the amount of fats, grease and solids that enter your sewer system and ultimately clog the drainfield.
